

# **Heartworm disease is a “walking time bomb” danger to small animals.**

Prevention against this mesquito borne disease is necessary.

Annual test for this disease is recommended because preventive can be thrown up or not given in the required manner.

Complications for this disease are fatal.

Puppies and cats should get preventative.

Heartgard, Iverhart Max or Interceptor is recommended for dogs.

Advantage Multi or Revolution is recommended for cats.

Mesquito bites occur inside buildings as well as outside.

Extra rain and warm climates increase mesquito population.

Mesquitos bite year round in Texas, Louisiana, Florida, Mexico, etc.

An infected animal is a danger to the animals around it.
